

BRAND GUIDELINES

01 - LOGO

PRIMARY LOGO

Based on the font 'VAG Round Pro' the Ubisense logo has a combination of straight and rounded letter forms

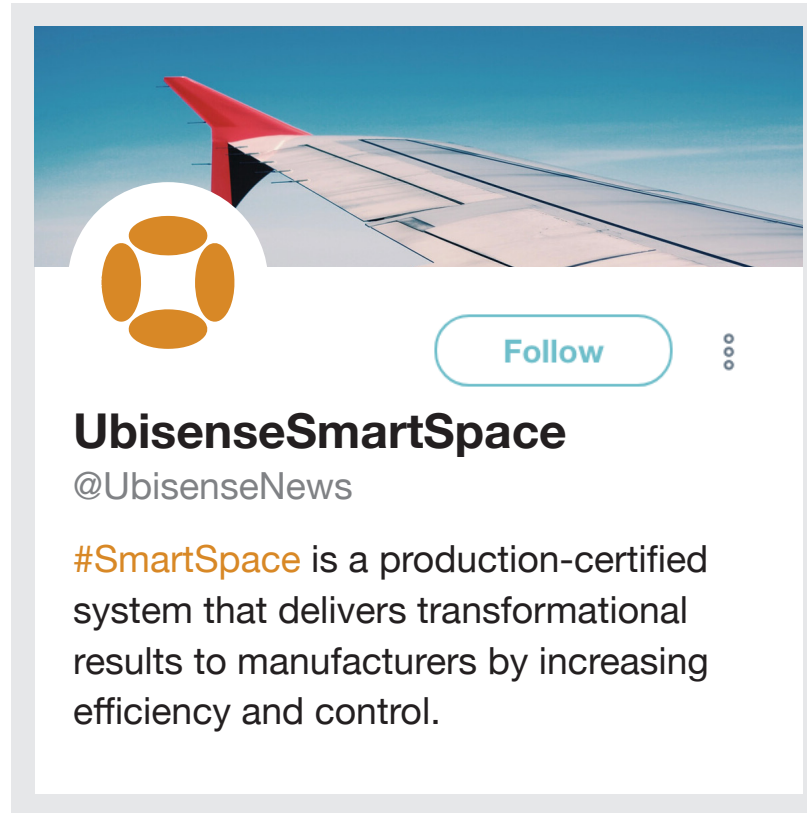

ALTERNATIVE LOGO

For use on dark backgrounds and carefully selected imagery

UBISENSE ICON

The icon should be used where a smaller logo is required

LOGO USAGE

The width of the 'n' taken from the Ubisense logo denotes the white-space that should be allowed around the logo

The minimum size for using the primary logo is 25mm or 100 pixels

The width of one 'oval' denotes the white-space that should be allowed around the icon

LOGO USE ON BACKGROUNDS

The logo should only be positioned over unfussy imagery with a dark overlay or over one of the brand colours

✘ INCORRECT

✔ CORRECT

An aerial photograph of a tractor with a large white sensor array mounted on its rear, moving through a field of tilled soil. The tractor is green and blue, and the sensor array is a large, rectangular white panel. The field is divided into neat, parallel rows of soil, suggesting a precision agriculture or autonomous farming application. The lighting is bright, casting shadows from the tractor and the sensor array onto the ground.

O2 - FONTS & COLOURS

PRIMARY FONT

Titillium Web is a Contemporary Sans Serif font with a slightly square outline, giving it a technical feel whilst still retaining the warmth and personality of a Humanist font.

Search mail

How are the brand guidelines and site structure coming along? I have a number of meetings later this week where an update would be useful.

Thanks

Steve

PASSENGER VEHICLES

SmartSpace
Yard Monitor

SmartSpace monitors the location of WIP in the yard, where high volumes of finished and unfinished product are widely dispersed around site, awaiting the next phase in their production lifecycle. Operations teams can now instantly find individual or groups of products, increasing productivity by eliminating search waste.

 **Ubisense**

Problem

- Wasted time searching for WIP
- Production resources left idle waiting for next job
- Movement waste from not identifying the closest available WIP that matches the required production step
- Ageing WIP that's been forgotten or misplaced

Solution

- Real-time location of all WIP across both on and off-site storage yards
- Integrating multiple production data sources and using them to direct search priorities
- Changing map-based object appearance to convey real-time WIP status
- Highlighting WIP based on total time in process

Value

- Increased throughput and reduced WIP inventory cost by reducing cycle time
- Better decision making through site-wide view of WIP disposition
- Increasing labour productivity by reducing production resource idle time
